

<h2>Decisions</h2>  <p>How are predictions used to make decisions that provide the proposed value to the end-user?</p> <p>Hospitals:</p> <ul style="list-style-type: none"> - Filter out 25% randomly (hold-out set). - Select patients who have the highest risk for diabetes and suggest them take a diabetes test. 	<h2>ML task</h2>  <p>Input, output to predict, type of problem.</p> <p>< Does this patient have diabetes? ></p> <ul style="list-style-type: none"> - Classification task 	<h2>Value Propositions</h2>  <p>What are we trying to do for the end-user(s) of the predictive system? What objectives are we serving?</p> <p>Build a system to predict the onset of diabetes based on diagnostic measures:</p> <p>Hospitals can use this system to quickly evaluate patients' risk for diabetes by entering patients' diagnostic measures and suggest those with higher risk should take a diabetes test.</p> <p>The end goal is to find out those who have highest risk for diabetes and have them tested as soon as possible.</p>	<h2>Data Sources</h2>  <p>Which raw data sources can we use (internal and external)?</p> <p>Open Data from:</p> <ul style="list-style-type: none"> - The National Institute of Diabetes and Digestive and Kidney Diseases - Hospitals 	<h2>Collecting Data</h2>  <p>How do we get new data to learn from (inputs and outputs)?</p> <p>Every month request data on:</p> <ul style="list-style-type: none"> - Diagnostic measures - Diabetes test results
<h2>Making Predictions</h2>  <p>When do we make predictions on new inputs? How long do we have to featurize a new input and make a prediction?</p> <p>Every month we make predictions for new patients for the risk for diabetes (using all diagnostic measures except for diabetes outcome).</p>	<h2>Offline Evaluation</h2>  <p>Methods and metrics to evaluate the system before deployment.</p> <p>Test on labeled data, and compute:</p> <ul style="list-style-type: none"> - F1 score - precision - recall - ROC AUC 		<h2>Features</h2>  <p>Input representations extracted from raw data sources.</p> <ul style="list-style-type: none"> - Pregnancies: Number of times pregnant - Glucose: Plasma glucose concentration a 2 hours in an oral glucose tolerance test - Blood Pressure - Skin Thickness - Insulin - BMI: Body mass index - Diabetes Pedigree Function - Age 	<h2>Building Models</h2>  <p>When do we create/update models with new training data? How long do we have to featurize training inputs and create a model?</p> <p>Update model every quarter (with new data available).</p>
	<h2>Live Evaluation and Monitoring</h2>  <p>Methods and metrics to evaluate the system after deployment, and to quantify value creation.</p> <ul style="list-style-type: none"> - Compare diabetes outcome to prediction on hold-out set. - Decrease late diabetes diagnosis rate.
